ENTRY-LEVEL SOFTWARE ENGINEER

Entry-level software engineer with hands-on experience building and deploying full-stack MERN applications from concept to production. Ready to bring full-stack ownership to an entry-level software engineering or help desk support role. Bilingual: English and Spanish.

EDUCATION

Software Engineer Certificate, TripleTen

Graduated April 2026

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript, HTML5, CSS3, React, Node.js, Express, Flask, Jinja

Data & APIs: MySQL, SQLite, SQLAlchemy ORM, MongoDB, RESTful API design, third-party API integration

Tools & Practices: Git, GitHub Actions, Render, responsive web design, OOP, BEM, accessibility, pytest, Ruff, Bandit, CI/CD

KEY SKILLS

Communication: Bilingual in English and Spanish; clear written and verbal communication

Problem-Solving: Self-directed troubleshooting and debugging across the full application stack

Collaboration & Leadership: Cross-functional teamwork; leadership and integrity built through Eagle Scout achievement

Work Style: Adaptable, fast learner, detail-oriented, strong time management on self-managed projects

PROFESSIONAL EXPERIENCE

Software Engineer, Founder of Discover Yourself Website

10/2025 - Present

[discover-yourself.app](#)

- Architected and launched a full-stack MERN web application from concept to a live, monetized product using HTML, CSS, JavaScript, and React to deliver a responsive user experience.
- Engineered RESTful APIs with Express and MongoDB to connect the React frontend, enabling secure user accounts and reliable data access.
- Automated cloud deployment through GitHub Actions CI/CD pipelines, streamlining releases to Render and improving deployment reliability.
- Strengthened backend security and search visibility by applying Node.js best practices and SEO optimization techniques.

Software Engineer, TicketDesk System - Discover Yourself Website

09/2026 - Present

[Local IT service management application](#)

- Built a role-based ticketing system with Python, Flask, SQLAlchemy, SQLite, Jinja, and BEM CSS for incident intake, searchable queues, assignment, SLA tracking, comments, and audit history.
- Applied OOP, application factories, blueprints, and a service layer to separate HTTP handling, ticket workflows, persistence, and presentation concerns.
- Implemented requester, agent, and administrator permissions with PBKDF2 password hashing, CSRF protection, parameterized ORM queries, validation, and restrictive security headers.
- Created an idempotent local setup script that generates secrets, initializes and seeds SQLite, and launches the application through a Python virtual environment.
- Built 20 model, integration, workflow, and abuse-case tests reaching 91% coverage; added Ruff and Bandit checks plus a risk-based exploratory QA plan.

AWARDS

Eagle Scout Certificate, Boy Scouts of America, Troop 1869, Washington DC

01/2010 - 01/2018
