ENTRY-LEVEL SOFTWARE ENGINEER

Entry-level software engineer with hands-on ownership of full-stack applications from design through deployment and QA. Builds secure, maintainable systems with Python, JavaScript, React, Flask, REST APIs, SQL/NoSQL databases, OOP, automated tests, and CI/CD. Bilingual: English and Spanish.

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript, HTML5, CSS3, Flask, React, Node.js, Express, Jinja

Data & APIs: MySQL, SQLAlchemy ORM, MongoDB, RESTful API design, third-party API integration, relational modeling

Engineering: OOP, application factories, service layer, RBAC, BEM, responsive design, accessibility, security headers, CSRF protection

Testing & Delivery: pytest, fixtures, integration/security testing, 91% coverage, Ruff, Bandit, Git, GitHub Actions, Python virtual environments, Render

PROFESSIONAL EXPERIENCE

Software Engineer, Founder - Discover Yourself Full-Stack MERN Application

10/2025 - Present

[*discover-yourself.app*](#)

- Architected and launched [*discover-yourself.app*](#), a monetized full-stack MERN application with secure accounts, REST APIs, responsive UI, custom DNS, and GitHub Actions deployment to Render.
- Engineered TicketDesk, a role-based IT service management application using Python, Flask, SQLAlchemy, SQLite, Jinja, and BEM CSS with ticket intake, search, assignment, SLA tracking, comments, and audit history.
- Applied an OOP service layer and application-factory/blueprint architecture to separate HTTP, domain workflow, persistence, and presentation concerns.
- Hardened authentication and authorization with PBKDF2 password hashing, CSRF controls, parameterized ORM queries, object-level permissions, input limits, and restrictive browser security headers.
- Built 20 model, request-integration, workflow, and abuse-case tests reaching 91% coverage; added Ruff and Bandit quality gates plus a structured exploratory QA plan.
- Automated local setup with a Python virtual environment and SQLite; the idempotent script generates secrets, creates tables, seeds demo data, and launches the service.

EDUCATION & LEADERSHIP

Software Engineer Certificate, TripleTen

April 2026

Eagle Scout, Boy Scouts of America - Troop 1869, Washington, DC

2018
